Software Engineer with 4+ years of experience in backend systems, distributed services, and payment processing.

Built, launched, and maintained large-scale SaaS features at Amazon.

Proficient in AI-assisted development using Claude Code, Opencode, and ChatGPT for code generation, architecture design, and debugging.

EXPERIENCE

Software Engineer, Contract

OxFACADE | Jun 2024 – March 2026 | Seattle, WA

- Built a data analysis tool for a client's NoSQL database to support operational investigations and data integrity checks.
- Designed and built a real-time 2D game engine in C# using Godot (5,000+ LOC), with procedural world generation, chunk-based spatial loading, a generic state machine framework, and an event-driven component architecture.
- Developed a Playwright-based test automation framework deployed on cloud infrastructure, enabling continuous validation of production workflows and early regression detection.
- Validated feature rollouts for clients via A/B testing, measuring impact on key metrics prior to full deployment.

Software Engineer

Amazon, Third Party Subscriptions | March 2022 – May 2024 | Seattle, WA

- Inherited and launched a SaaS renewal service that updated existing subscription prices to match current retail listings at scale, resulting in a \$3 million increase in annual revenue in 2023.
- Owned and maintained distributed microservices handling vendor fulfillment integration, billing, subscription lifecycle management, and customer-facing widgets on Amazon's Detail and Checkout pages.
- Investigated, triaged, and resolved hundreds of production incidents; built and maintained metrics dashboards using log aggregation and alerting systems, driving improvements to system reliability.

Software Engineer

Galileo Financial Technologies, Core Services | October 2019 – January 2021 | Salt Lake City, UT

- Maintained and enhanced a high-volume payment processing platform handling reconciliation, authorization, and disputes.
- Built banking integrations to support FDIC-insured account functionality for banking-as-a-service customers.

Internships

Education at Work w/ Microsoft, Salt Lake City, UT | Sep 2018 – Oct 2019

Digital Guardian, Lehi, UT | Jun 2016 – Aug 2016, Jun 2017 – Aug 2017

PROJECTS

AI E-Ink Desk Agent

Python, Raspberry Pi, llama.cpp, OpenAI API, MCP

- Built an autonomous AI agent running on two Raspberry Pis that observes its environment via camera, reasons using a two-model architecture (cloud LLM for tool-calling, local Gemma 4 vision model via llama.cpp), and delivers health prompts and conversation through an e-ink display.
- Implemented an agentic loop with OpenAI-compatible tool-calling, MCP integration for extensible tool servers, and custom context window management with LLM-driven message compaction.

TECHNICAL SKILLS

Languages: Java, Python, C, C#, C++, SQL

Cloud / Infrastructure: Distributed Systems, Microservices, REST APIs, AWS (DynamoDB, Lambda, CloudWatch, CloudFormation, SQS, SNS, IAM), CI/CD

Technologies / Methodologies: Spring, Godot Engine, Git, Linux, Oracle SQL, NoSQL, Agile, Scrum, Playwright

AI Tools: Claude, ChatGPT, AI-assisted coding and code generation

EDUCATION

University of Utah | Bachelor of Science, Computer Science | May 2020 | GPA: 3.9/4.0
